If you have any pre-early 1952 manuals that use the old part numbers and would like to contribute to the parts list please send a copy of the Parts List and Schematic pages (or a copy of the manual). Also, if possible include the manual date (Often found on the back cover or on some of the drawings and schematics.); I'm trying to determine when Heathkit switched over to the later parts numbering system (It was sometime after Jan 15, 1950). The latest revision of this list can be found at:
